

## **BRA/FETA Review of consultation for BS EN 378 – 16<sup>th</sup> July 2025**

### **Meeting notes**

**Attendees:** Over 60 members joined the meeting chaired by Chris Yates, FETA and the prEN 378 overview meeting was produced and delivered by Steve Benton, Cool Concerns.

### **Meeting Purpose**

To provide an overview and gather feedback on the draft revision of prEN 378 refrigeration standard.

### **Key Takeaways**

- Major changes to prEN 378 include new intrinsic/extrinsic design approaches, revised charge (refrigerant quantity safety limit) calculations, with increased flexibility for flammable refrigerants
- The standard aims to improve safety while allowing more design options, especially for A2L/A3 refrigerants
- Industry feedback on the draft is critical; comments due by August 26th via BSI portal
- Some concerns raised about readability/accessibility of draft on BSI portal

### **Topics**

#### **Overview of Standards Revision Process**

- 10+ year process to revise EN 378, delayed partly by COVID
- Now at public inquiry/commenting stage, open until August 26th
- RHE/18 national committee will review comments Sept 4th and submit UK position
- Final vote expected Sept 2026, publication early 2027
- Challenging to access draft - only available on BSI online portal (not downloadable or printable)

#### **Key Changes in Part 1**

- New intrinsic & extrinsic design approaches
- Revised charge calculations using "releasable quantity" concept
- Increased charge limits for flammable refrigerants in many cases
- New F-factor and H-factor for refrigerant safety limit calculations
- More flexibility but also more complexity in some areas

#### **Changes to Other Parts**

- Part 2: Minor changes, to ensure continued PED alignment
- Part 3: Changes to align with Part 1 revisions
- Part 4: Replaced by BS EN ISO 5149-4

- New Part 5: Refrigerant properties (formerly Part 1 Annex E)

### **Safety Considerations**

- More emphasis on designer responsibility and risk assessment
- Increased focus on ventilation, gas detection, and mitigation measures
- New requirements for below-ground installations
- Revised machine room requirements

### **Industry Implications**

- More design flexibility, especially for A2L/A3 refrigerants
- Increased complexity requires more upfront design work
- Potential challenges in transitioning to new approaches
- Need for updated guidance/training on applying new standard

### **Next Steps**

- Industry to submit comments on draft via BSI portal by August 26th
- Trade associations (FETA, BRA, IOR) to gather member feedback and develop positions
- RHE/18 to review all comments and determine UK position on Sept 4th
- Consider developing industry guidance on applying new standard once finalized
- Raise concerns about draft accessibility to BSI/standards bodies

### **Action Items**

- **Email meeting participants with link to BSI comment portal + reminder of Aug 6 deadline for public comments – Action Martyn Cooper/Chris Yates**
- **Draft email to BSI/standards bodies re difficulties accessing/reviewing draft standard online; coordinate wording with Steve Benton - Action Chris Yates**
- **Create+distribute questionnaire to gauge member feedback on draft EN 378 standard; aim to send this week - Action Chris Yates**
- **Draft guidance for members on submitting individual company responses + feeding major issues to FETA for potential association position - Action Martyn Cooper**
- **Prepare BRA position on draft EN 378 to submit via Mike Duggan for RHE18 meeting on Sep 4 - Action Chris Yates**
